

User's Hangman Documentation

To get started, read a brief introduction to the game. Then enter the number of letters in the word you want to guess in the console. The program randomly chooses a word that the player must guess. After that, a word appears hidden behind the dashes, which you will have to guess.

You will see the number of possible attempts and the place to enter the first letter.

Click on the letter that is supposed to be the secret word and wait for an answer about whether this letter is included in the secret word or not. If it is not in the word, a part of the Hangman will be displayed and the player will be asked to guess another letter. If the selected letter is in the hidden word, its location in the word will be shown.

The player will then be sent back to the letter input to select the next letters until they guess the word correctly or the remaining attempts are 0. A piece will be added to the Hangman for each wrong guess, and once the Hangman (10 mistakes made) is done, the game is over.

After completing the game, players will be prompted to replay the game or exit.
